

The Sperm and the Dome: An Ancient Pattern

Robert Galida <https://fantasyattractor.com/>

May 2026

You have seen the diagram.

It appears in biblical studies textbooks, online articles about ancient Near Eastern cosmology, and even on apologetics websites trying to explain away the plain meaning of Genesis.

A flat disc earth.

A solid dome (*rāqīa'*) above.

A cosmic ocean below.

The sun, moon, and stars move inside the dome.

Rain enters through literal windows in the sky.

It looks primitive.

Like a child's drawing of a snow globe.

But look again. Squint. Rotate the image ninety degrees.

What do you see?

A sperm.

A single, potent, ordered structure swimming through an infinite ocean.

- The **head** is the dome – the firmament containing the celestial lights.
- The **midpiece** is the flat disc of the earth – the solid ground where life emerges.

- The **tail** is the cosmic ocean below – the chaotic, fertile waters from which everything springs.

And the whole thing is adrift in an infinite, dark, supportive medium – the same infinite ocean that appears in Genesis as the *tehom* (the deep), the primordial waters over which the Spirit of God hovers.

This is not a coincidence.

It is a **pattern**.

The Attractor Framework: A Lens

In my attractor framework, **persistence under perturbation** is the fundamental mark of reality.

Two classes of attractors exist:

- **Conservative attractors** – the eternal skeleton: electrons, protons, neutrinos, photons. They are time-symmetric, unchanging, and provide the invariant rhythms of the universe (the “metronome”).
- **Dissipative attractors** – the transient dance: life, mind, society, and everything that requires energy flow, exports entropy, and eventually runs down.

A sperm is a **low-entropy conservative structure** – a packet of highly ordered information (DNA) that is relatively stable and fuel-efficient.

It swims through a **high-entropy dissipative environment** – the chaotic, nutrient-rich ocean of potential.

Its journey is a perturbation.

Fertilisation, when it succeeds, is a **phase transition**: the emergence of a new, more complex attractor (the zygote) from

the coupling of two initial basins (sperm and egg).

The subsequent explosion of growth – cell division, differentiation, morphogenesis – is the **transient dance** of life.

The Ancient Mind Saw the Same Pattern

The biblical authors had no microscopes. They could not see a sperm cell.

But they observed the world around them, and they projected the **microcosmic pattern of fertilisation** onto the **macrocosmic canvas of the sky**.

- The **infinite ocean** is the primordial *tehom* – the raw, undifferentiated potential before creation.
- The **sperm** is the *rāqīa'* – the solid dome that separates and organises the waters above from the waters below.
- The **fertilised egg** is the cosmos itself – the flat disc of the earth, the lights in the dome, the living creatures on the land.

The ancient author of Genesis was not a scientist.

But he was a **pattern-recogniser**.

He intuited that the universe begins as a single, ordered perturbation in an infinite, chaotic sea.

That is not primitive superstition.

That is **dynamical intuition**.

The Cosmic Conception Hypothesis

Modern science has its own version of this same pattern.

The “cosmic conception hypothesis” (found in some theoretical papers) compares the fertilisation of a galaxy by a supermassive black hole to the fertilisation of an egg by a sperm.

The black hole is the seed; the galaxy is the developing organism.

The same archetype recurs because it is **structurally necessary**: any self-organising system that emerges from a homogeneous background must be born as a localised, ordered perturbation.

The Genesis diagram is not a mistake.

It is a **map**.

The Sperm in the Infinite Ocean

When you look at that ancient Near Eastern cosmology diagram – the flat earth, the solid dome, the cosmic ocean – you are looking at a **sperm in an infinite ocean**.

The author could not have known this consciously.

But the attractor of reality – the deep structure of persistence under perturbation – guided his hand.

- The infinite ocean is the potential.
- The sperm is the first perturbation.
- The fertilised egg (the cosmos) is the new attractor basin.
- And the dance of life – stars, planets, minds, civilisations – is the transient, dissipative dance that follows.

The diagram is not a coincidence.

It is a **necessary projection of a universal dynamic**.

The sperm and the dome are the same pattern, separated by millennia and scale.

You are free to see it or not.

But once you see it, you cannot unsee it.

The mountain does not negotiate.

Neither does the Hebrew text.

Neither does the sperm.
